Access-Mode ID_1 — Core (Learning)

Release Orientation & Reading Guide

APOD-ID1-OR-001 • Informative • Non-Normative

Document Information:

Document Identifier: APOD-ID1-OR-001
Version: ID_1 Core / Learning
Status: Informative, Non-Normative
Date: February 2026

Abstract

This document provides a reading and orientation guide for the Access-Mode ID_1 — Core (Learning) release. It explains the purpose, scope, and intended use of the included learning materials, and clarifies how the priming and exemplar module sets should be interpreted and used together. This guide situates the ID_1 release in relation to the canonical Access-Mode method (Version E), the artifact lifecycle companion (Version E.2), and the Access-Mode Project Guide. It is informative and non-normative, and does not define requirements, controls, compliance criteria, or readiness. All outputs produced using this release remain learning artifacts and require human judgment.

ABSTRACT 1

1. PURPOSE OF THIS DOCUMENT 3

2. SCOPE AND POSTURE OF THIS RELEASE 3

3. WHAT THIS RELEASE CONTAINS 3

4. RECOMMENDED WAY TO USE THIS RELEASE 4

5. HOW TO READ THE INCLUDED ACCESS-MODE PAPERS 5

6. RELATIONSHIP TO OTHER ACCESS-MODE RELEASES 6

7. CLOSING NOTE 7

1. Purpose of this document

This document provides a **reading and orientation guide** for the **Access-Mode ID_1 — Core (Learning)** release.

It explains:

- what this release is for,
- how the included module sets should be read and used,
- how this release relates to the canonical Access-Mode papers and guides.

This document is **informative only**.
It does not define requirements, controls, compliance criteria, or readiness.

---

2. Scope and posture of this release

All content in this release is:

- **learning-oriented**
- **non-operational**
- **non-inspectable**

This release implements **Access-Mode ID_1 only**.

Operational reasoning (ID_2) and inspection reasoning (ID_3) are:

- **separate Access-Mode releases**
- **not included** at the time of this publication.

No material in this release should be interpreted as:

- governance approval,
- compliance assessment,
- inspection outcome,
- or deployment readiness.

---

3. What this release contains

This release provides **two complementary module sets**, both governed by **Access-Mode ID_1 (Learning posture)**.

3.1 Priming modules `/modules/` folder.

The priming modules are the **primary learning surface**.

They:

- contain expanded prompts and exercises,
- surface scope, assumptions, and boundaries,
- are intended to be **filled by the user**,
- support active reasoning with AI under ID_1 discipline.

These modules are intentionally more expansive to support learning.

3.2 Exemplar modules `/exemplar_modules/` folder.

The exemplar modules are **worked ID_1 examples**.

They:

- demonstrate what a disciplined ID_1 fill looks like,
- are concise and stripped of priming scaffolding,
- are published as **Working-PoD examples for instruction only**.

Exemplars:

- are **not templates**,
- are **not inspectable artifacts**,
- must **not** be reused as operational or review material.

---

4. Recommended way to use this release

The recommended learning pattern is **comparative and intentional**.

1. Begin by reading **Module 01** in both sets:
    - the priming module, and
    - the exemplar module.
2. Complete the priming modules sequentially:
    - fill all six modules with your own reasoning,
    - allow AI assistance only within ID_1 boundaries,
    - complete exercises and reflections fully.
3. Create **two separate AI projects**:
    - a primary learning project using your filled priming modules,

    - a reference project using the exemplar modules.
4. Compare the two projects to:
    - identify scope drift,
    - notice tone or authority creep,
    - refine clarity, boundaries, and assumptions.

This comparison is a **learning technique**, not an evaluation or validation step.

---

5. How to read the included Access-Mode papers

This release includes three supporting PDF documents in the `/docs/` folder for reading convenience.

5.1 APOD-TR-006 — Version E

Access-Mode Method (Canonical)

Version E is the **authoritative method paper**.

Read this paper to understand:

- why reasoning posture matters in AI-assisted governance,
- how ID_1, ID_2, and ID_3 are explicitly separated,
- primary vs secondary mode discipline,
- validation and misalignment testing,
- non-normative scope and explicit non-claims.

Version E governs **how reasoning is constrained**.

5.2 APOD-TR-006-E.2 — Version E.2

Artifact Lifecycle Companion

Version E.2 is an **informative companion** to Version E.

Read this paper to understand:

- how Working-PoDs move from draft to populated to frozen states,
- how “filled” means different things under ID_1, ID_2, and ID_3,
- how example Working-PoDs should be interpreted safely.

Version E.2 explains **what an artifact represents at a given stage**.
It does not extend or modify the Access-Mode method.

5.3 Access-Mode Project Guide (PDF)

The **Access-Mode Project Guide** explains:

- how to set up AI projects correctly,
- single-mode and mixed-mode rules,
- file requirements and project naming,
- validation and record-keeping discipline.

Where guidance differs:

- the **Project Guide governs project setup**, and
- **Version E governs method interpretation**.

Note:

The internal Markdown file `release_notes_ID_1.md` in the project root remains the canonical reference for release structure and usage.

This PDF is provided as a reading and orientation companion.

All canonical and public review materials remain in the
v1.0-access-mode release on GitHub:

https://github.com/Access-PoD/access-pod-artifacts/releases/tag/v1.0-access-mode

---

6. Relationship to other Access-Mode releases

- This release implements **ID_1 (Learning)** only.
- ID_2 (Operational) and ID_3 (Inspection) are published separately.
- Full template module sets for all modes are provided in the **v1.0-access-mode** release.

Each Access-Mode must be used in a **separate project**, according to its posture.

---

7. Closing note

This release is complete when users:

- understand how governance reasoning is constrained under ID_1,
- can articulate intent, scope, and boundaries clearly,
- and can distinguish learning artifacts from operational or inspectable ones.

Access-Mode ID_1 is about **learning before authority**.
