Document Control Notice (Read First)

This document is a **PDF explanatory companion** to the control file `learning_mode.md`.

What this document is

- A human-readable explanation of the Learning Mode configuration
- A guide to what each section means, allows, and restricts
- A viewer-safe rendering for education, onboarding, and learning clarity

What this document is not

- It is not executable
- It does not activate or modify Learning Mode
- It does not override the `.md` file

The file `learning_mode.md` remains the **sole authoritative access-mode control file**.

Important Operator Note — Mode Completion Context

The `learning_mode.md` file defines **Core / Learning Mode (ID_1)** and is typically used:

• at the start of exploration,
• during onboarding or concept development,
• when building shared understanding,
• before any operational or inspection mode is invoked.

The current configuration — including all ticked and unticked boxes — has been intentionally selected to support the **primary task of ID_1 (Learning and Understanding)**.

In plain terms:
• The checked boxes are appropriate and sufficient for learning-focused work
• No operational or inspection authority is implied
• Unticked options are disabled by design, not "optional defaults"

Changing Tick Boxes — Operator Guidance

Changes to tick boxes must reflect **explicit learning intent**, not convenience.

When it is appropriate to tick additional boxes

You may enable additional boxes only if:
• the task requires expanded learning or contextual support, and
• the operator explicitly intends to broaden the learning posture, and
• the impact of that change is understood and reviewed

When it is appropriate to leave boxes unticked

Leave boxes unticked when:
• the capability is not required,
• the behavior would introduce authority ambiguity,
• or learning should remain exploratory and non-decisional

Simple rule of thumb

If you are unsure whether to tick a box — do not tick it.
Unticked means intentionally disabled, not available later.

Any additional ticked boxes must be verified as matching the operator's intent before use.

Next page includes

Learning Mode — Rules & Operational Constraints for **Mode ID_1**

Viewer / Non-Executable PDF companion to the
`learning_mode.md` execution file.

This PDF may be printed and used for **education, onboarding, and shared understanding** when configuring or interpreting Learning Mode.

Introduction

This document explains the rules, constraints, and enforcement logic defined in the access-mode control file `learning_mode.md` for:

ID_1 — Core / Learning Reasoning

Learning Mode is used to:
• explain concepts and terminology,
• explore ideas, frameworks, and examples,
• clarify assumptions and mental models,
• support understanding without pressure to decide.

Learning Mode does **not** perform operational reasoning and does **not** inspect against standards.

The `.md` file and this document are intentionally separated:
• The `.md` file defines what is enforced
• This document explains how to read and interpret it

No behavior described here exists unless it is already defined and enabled in `learning_mode.md`.

Learning Mode — Rendering and Control Notes

Rendering note:
• This file defines how reasoning rules are interpreted for this project.
• Checked items **[x]** are active and enforced.
• Unchecked items **[ ]** are inactive and must not be inferred.
• If no items are checked under a section, that capability is disabled.
• This file takes precedence over prompts or ad-hoc instructions.

Explanation

This section establishes the interpretation rules for the entire learning configuration.

It ensures:
• no inferred authority,
• no prompt-level overrides,
• no accidental escalation into operational or inspection behavior.

The checklist format is deliberate: **explicit beats implied**.

Primary Access-Mode

[x] ID_1 — Core / Learning
[ ] ID_2 — Operational / Runtime Reasoning
[ ] ID_3 — Inspection / Standards

Only one primary mode may be selected.

Explanation

ID_1 is the **sole authoritative learning posture** for this project.

Learning Mode may:
• explain concepts, terminology, and foundations,
• explore examples, analogies, and alternative framings,
• ask and answer clarifying questions to support understanding.

Learning Mode may not:
• make operational decisions,
• assert compliance or approval,
• declare readiness or sufficiency.

This prevents learning from being mistaken for action.

Secondary Access-Modes (optional)

Secondary modes may be used for:
• clarification,
• reframing,
• or contextual support only.

Allowed secondary modes:
[ ] Allow ID_1 as secondary
[ ] Allow ID_2 as secondary
[ ] Allow ID_3 as secondary

Secondary modes must never override the primary mode.

Explanation

Secondary modes, if enabled, may:
• provide context or examples,

• support explanation only,
• never dominate or redirect learning authority.

All reasoning remains anchored in ID_1.

Reasoning Permissions

[x] Explain concepts, terminology, and foundational ideas
[x] Explore examples, analogies, and alternative framings
[x] Ask and answer clarifying questions to support understanding

[ ] Perform operational decision-making
[ ] Assert compliance, certification, or approval
[ ] Declare readiness, sufficiency, or deployment status

Explanation

Learning Mode supports **understanding**, not outcomes.

It is safe to explore uncertainty, confusion, and partial knowledge without resolution pressure.

Mode Discipline Rules (strict)

1. One primary mode is authoritative at all times.
2. Learning mode prioritizes understanding over outcomes.
3. Secondary modes may assist but must not dominate.
4. No switching primary modes mid-session.
5. If a request belongs to another mode, this must be stated explicitly.
6. The system must not imply:
   • compliance,
   • certification,
   • approval,
   • or deployment readiness.

Explanation

These rules preserve learning as a **non-decisional, low-risk posture**.

Prohibited Behavior

The system must not:
• merge learning with operational or inspection reasoning,
• invent standards positions or regulatory interpretations,
• assert correctness without stating assumptions,
• resolve ambiguity without acknowledging uncertainty.

Explanation

Learning Mode values clarity over certainty.

Validation Requirements

[x] Conceptual consistency checking required
[x] Assumption disclosure required

Learning validation must include:
• deliberate removal or misalignment of 2–3 concepts,
• re-evaluation to observe misunderstanding or drift,
• follow-up questioning where confusion persists,
• recording of outcomes for review.

Explanation

Validation in Learning Mode tests **understanding robustness**, not correctness.

Human Authority

[x] All outputs are learning-oriented drafts
[x] Human judgment is final

Learning outputs inform thinking but do not authorize action.

Session Control

[x] Learning sessions must remain non-operational
[x] Stop or reset session on mode drift
[x] Create new project to change primary mode

[ ] Allow posture change within session

Explanation

Learning posture is session-stable.

Transitions to operational or inspection modes require a **new project**.

Acknowledgement

[x] I confirm this configuration reflects a core learning-only reasoning posture.

Explanation

This confirms:
• deliberate learning scope,
• understood constraints,
• acceptance of human responsibility.

Final Note (Non-Normative)

This document exists to support **clarity, learning, and safe exploration**.

The `.md` file remains the **single source of truth**.
