Prompts & Project Names — Examples

Model-Agnostic Governance Reasoning & Validation Guide

(v1.0-Access-mode)

Document status: Informative
Audience: Facilitators, operators, reviewers, governance practitioners
Applies to: v1.0-Access-mode and derived mode configurations

Table of Contents

1. How to Use This Document

2. Project Name Examples (with Purpose)

2.1 ID_1 — Learning (Foundational)
2.2 ID_2 — Mentor (Operational)
2.3 ID_3 — Organizer (Inspection)
2.4 Words to Prefer and Avoid

3. Prompt Examples by Mode

3.1 ID_1 — Learning (Foundational)
3.2 ID_1 primary → ID_2 secondary (Learning with operational lens)
3.3 ID_1 primary → ID_3 secondary (Learning with inspection lens)
3.4 ID_2 — Mentor (Operational / Runtime)
3.5 ID_2 primary → ID_3 secondary (Operational reasoning, organized for review)
3.6 ID_3 — Organizer (Inspection / Review)

4. Experimental & Guardrail Guidance

4.1 ID_4 — Custom (Experimental / User-Defined)
4.2 Prompts to Avoid (Guardrail List)

1. How to Use This Document

This document provides **practical examples only**.

It is intended to be used **alongside** the following canonical references:

- **Access_Mode_Project_Guide (PDF)** — how to set up projects correctly
- **APOD-TR-006 (Version E)** — method and reasoning discipline

This document does **not** explain Access-Mode concepts, rules, or theory.
It assumes the project has already been set up correctly.

Use this document when you want to:

- choose a **safe project name**
- apply **clear, posture-correct prompts**
- avoid over-confidence and mode drift
- speed up facilitation or review work

Do not use this document to:

- learn Access-Mode for the first time
- decide compliance, approval, or adequacy
- replace human judgment or validation

If a prompt or project name conflicts with the Project Guide,
the Project Guide always takes precedence.

---

2. Project Name Examples (with Purpose)

Project names act as a **control signal** for AI behaviour.
Use simple, literal words that reflect the **primary Access-Mode**.

ID_1 — Learning (Foundational)

Recommended project names

- `My AI Governance — Learning`
- `AI Governance — Learning Workspace`

Why this works

- Signals explanation and understanding
- Reduces prescriptive or authoritative tone
- Best for concepts, scope, and definitions

ID_2 — Mentor (Operational)

Recommended project names

- `My AI Governance — Mentor`
- `AI Governance — Operational Mentor`

Why this works

- Encourages scenario-based reasoning
- Frames AI as guidance, not authority
- Supports stress, drift, and failure analysis

ID_3 — Organizer (Inspection)

Recommended project names

- `My AI Governance — Organizer`
- `AI Governance — Review & Organization`

Why this works

- Emphasizes structure and clarity
- Avoids implying decisions or approval
- Suitable for inspection and standards work

Words to Prefer

- Learning
- Mentor
- Organizer
- Review
- Workspace

Words to Avoid

- Expert
- Authority
- Validator
- Certifier
- Compliance Engine
- Decision Maker

These increase the risk of over-assertive outputs.

---

3. Prompt Examples by Mode

This section provides prompt examples only.

Each mode is presented using the same structure:

- **Single-mode prompts** (primary mode only)
- **Cross-mode prompts** (only where explicitly allowed)

All prompts may be copied directly or lightly edited.

3.1 ID_1 — Learning (Foundational)

Use these prompts when **ID_1 is the primary mode**.

Single-mode prompts (ID_1 only)

- Explain the purpose of this governance concept in plain language.
- What responsibility remains human in this context, and why?
- What assumptions are explicitly stated in this module?

Copy or edit prompt below

```
Explain this concept using the uploaded learning modules only.
Do not assume deployment, runtime enforcement, inspection, or compliance.
Focus on intent, scope, and understanding.
```

3.2 ID_1 primary → ID_2 secondary

(Learning with operational lens)

Rule: ID_2 may comment, not redefine.

Copy or edit prompt below

```
ID_1 primary → ID_2 secondary

Explain this concept, then note where its assumptions might fail under
operational pressure.
Identify potential runtime risks without changing the foundational
explanation.
```

3.3 ID_1 primary → ID_3 secondary

(Learning with inspection lens)

Rule: ID_3 may reframe, not judge.

Copy or edit prompt below

```
ID_1 primary → ID_3 secondary

Explain this concept, then rewrite it so assumptions are clear to a reviewer.
Do not imply adequacy, approval, or standards alignment.
```

3.4 ID_2 — Mentor (Operational / Runtime)

Use these prompts when **ID_2 is the primary mode**.

Single-mode prompts (ID_2 only)

- What happens if this assumption fails during operation?
- Where could governance drift occur over time?
- What uncertainty remains unresolved in this scenario?

Copy or edit prompt below

```
Analyze this governance concept under operational conditions.
Treat all conclusions as exploratory.
Do not assert adequacy, approval, or compliance.
```

3.5 ID_2 primary → ID_3 secondary

(Operational reasoning, organized for review)

Rule: ID_3 may organize, not reinterpret.

Copy or edit prompt below

```
ID_2 primary → ID_3 secondary

Describe this operational governance scenario.
Then restructure the explanation so it is clear and review-ready.
Do not downgrade uncertainty or imply approval.
```

3.6 ID_3 — Organizer (Inspection / Review)

Use these prompts when **ID_3 is the primary mode**.

Note:
ID_3 has **no dual-mode primary variants**.
It may appear **only as a secondary mode** in Sections 3.2 and 3.5.

Single-mode prompts (ID_3 only)

- Which assumptions would a reviewer question?
- Where could this language be misinterpreted?
- What needs clearer traceability or structure?

Copy or edit prompt below

```
Reframe this content for inspection and review.
Improve clarity and structure without changing meaning.
Do not simulate runtime behavior or imply compliance.
```

Section reminder

- One project = one primary mode
- Secondary modes assist only when explicitly allowed
- If posture becomes unclear, stop and reframe

---

4. Experimental & Guardrail Guidance

This section covers two things:

1. A **custom ID_4** for controlled experimentation
2. A **Prompts to Avoid** list that prevents posture drift and authority creep

Nothing in this section overrides the canonical Access-Mode definitions.

4.1 ID_4 — Custom (Experimental / User-Defined)

ID_4 is not a canonical Access-Mode.
It exists to support **user-defined, time-bounded experimentation** where the standard modes do not cleanly apply.

Use ID_4 only when:

- the intent does not fit ID_1, ID_2, or ID_3,
- the work is exploratory or internal,
- outputs are clearly marked as *non-authoritative*,
- and human judgment remains fully responsible.

ID_4 must never be used for:

- external review,
- standards engagement,
- regulatory preparation,
- or decision-adjacent work.

Copy or edit prompt below

```
ID_4 — Experimental / User-Defined

This project is operating in a custom, experimental reasoning posture.
The purpose and boundaries are defined explicitly below.
All outputs are exploratory drafts and must not be treated as authoritative.
```

Example 1 — Method exploration

```
ID_4 — Experimental

Explore alternative ways this governance concept could be framed for
learning.
Do not assert correctness, adequacy, or applicability.
Treat this as exploratory thinking only.
```

Example 2 — Comparative reasoning

```
ID_4 — Experimental

Compare how this governance concept might be interpreted across different
contexts.
Do not conclude which approach is preferable or compliant.
Surface differences only.
```

Example 3 — Early synthesis

```
ID_4 — Experimental

Synthesize themes across these modules to identify open questions.
Do not propose solutions or recommendations.
Highlight uncertainty explicitly.
```

ID_4 discipline reminder

When using ID_4:

- define the **purpose in one sentence**,
- define **what this work will not be used for**,
- stop the session if conclusions start to sound definitive,
- transition back to ID_1, ID_2, or ID_3 for any real work.

ID_4 is a **sandbox**, not a shortcut.

4.2 Prompts to Avoid (Guardrail List)

The prompts below **must not be used** in any Access-Mode unless explicitly handled by a human outside the AI system.

These prompts reliably cause:

- authority creep,
- compliance hallucination,
- mode collapse,
- or false confidence.

❌ Avoid prompts that imply approval or adequacy

- “Is this compliant with the regulation?”
- “Does this meet the standard?”
- “Is this governance approach sufficient?”
- “Can we sign off on this?”

Why:
These bypass human judgment and imply authority the AI does not have.

❌ Avoid prompts that mix modes implicitly

- “Explain this concept and confirm it would work in production.”
- “Summarize this policy and assess whether it is acceptable.”
- “Rewrite this for review and suggest improvements.”

Why:
They silently combine learning, operational, and inspection postures.

❌ Avoid prompts that delegate judgment

- “Decide whether this risk is acceptable.”
- “Recommend the best governance approach.”
- “Choose the safest option.”

Why:
AI may assist reasoning, but must never decide.

❌ Avoid prompts that mask scope expansion

- “Can we also include a recommendation?”
- “Add best practices to this section.”
- “What else should we consider?”

Why:
These often expand scope without explicit re-validation.

❌ Avoid prompts that inflate certainty

- “Prove that this control is effective.”
- “Confirm there are no risks.”
- “Guarantee this will work.”

Why:
Governance reasoning must preserve uncertainty where it exists.

Guardrail rule of thumb

If a prompt:

- sounds like a decision,
- implies approval,
- removes uncertainty,
- or collapses multiple postures,

stop and reframe it using:

- a single primary mode,
- explicit constraints,
- and a learning or exploratory tone.

Section close

Access-Mode is strongest when:

- boundaries are explicit,
- uncertainty is visible,
- and human judgment remains central.

When in doubt:

- simplify the prompt,
- restate the posture,
- or switch projects.
