Access-Mode Quick Reference

For Facilitators and Reviewers

Quick Orientation — Not a Setup or Policy Document

(v1.0-Access-mode)

---

1. What Access-Mode Controls

Access-Mode controls **how the AI reasons**, not what it decides.

It is applied at the **project level**, not per message.

---

2. The Three Access-Modes (at a glance)

ID_1 — Learning

Purpose: Explain and understand
Focus: Definitions, intent, scope
Avoid: Runtime behavior, inspection, compliance

Ask: *"What does this mean?"*

ID_2 — Mentor (Operational)

Purpose: Explore behavior under use
Focus: Stress, drift, failure, uncertainty
Avoid: Approval, adequacy, compliance

Ask: *"What happens under pressure?"*

ID_3 — Organizer (Inspection)

Purpose: Prepare content for review
Focus: Structure, clarity, assumptions
Avoid: Runtime simulation, decisions

Ask: *"How will this be read?"*

---

3. Core Discipline Rules (non-negotiable)

- **One project = one primary mode**
- Secondary modes may **assist**, never decide
- Never switch primary modes mid-session
- If posture must change → **switch projects**
- Prompts refine behavior; **project setup controls it**

---

4. Single-Mode Projects (default)

Upload: 8 files

- 1 README file (primary mode)
- 6 modules from **one mode only**
- **1 mode-specific control file (ID_1 / ID_2 / ID_3)**

Do not upload:

- modules from other modes
- `organizer_mode.md` (single-mode only)

Recommended titles:

- *My AI Governance — Learning*
- *My AI Governance — Mentor*
- *My AI Governance — Organizer*

---

5. Mixed-Mode Projects (advanced)

Use **only when necessary**.

Upload exactly: 14 files

- 1 README file (primary mode)
- 6 modules (primary mode)
- 6 modules (secondary mode)
- **1 `organizer_mode.md`**

Rules:

- One primary mode only
- One secondary mode maximum
- `organizer_mode.md` is mandatory

---

6. Approved Mixed-Mode Patterns (Secondary mode only)

- ID_1 → ID_2
Learning with operational perspective

- ID_1 → ID_3
Learning with inspection clarity

- ID_2 → ID_3
Operational reasoning, organized for review

- ID_3
Single-mode only.
May appear as a secondary mode, never as a primary cross-mode.

All other combinations are not allowed.

---

7. Validation (always required)

After generating content:

1. Remove or alter **2–3 elements**
2. Re-run the model
3. Check whether errors are detected or invented

Also ask:

- “What assumptions are inferred?”

- “What would a reviewer challenge?”

---

8. When to Stop

Stop or reset if:

- the AI ignores mode limits,
- certainty increases without evidence,
- learning, operation, and inspection blur together.

Restart by:

- restating the opening instruction, or
- switching to a different project.

Key Reminder

Access-Mode is a discipline, not a feature.
Human judgment is always final.
